Comparison of good and bad UI design

Bad UI design:

1.Purpose of the Website

- This website is meant to help users **find and book hotels easily**.
- Users can choose a location, select check-in and check-out dates, and browse popular hotels with prices and reviews.

2. Design Style

- Bright, highly saturated colours (purple, yellow, orange, green) used together.
- Large text and buttons without consistent flow.
- Mixed font styles and sizes.
- Card-based hotel listing layout without proper alignment.
- Minimal spacing and visual balance.

3. Content

The content includes:

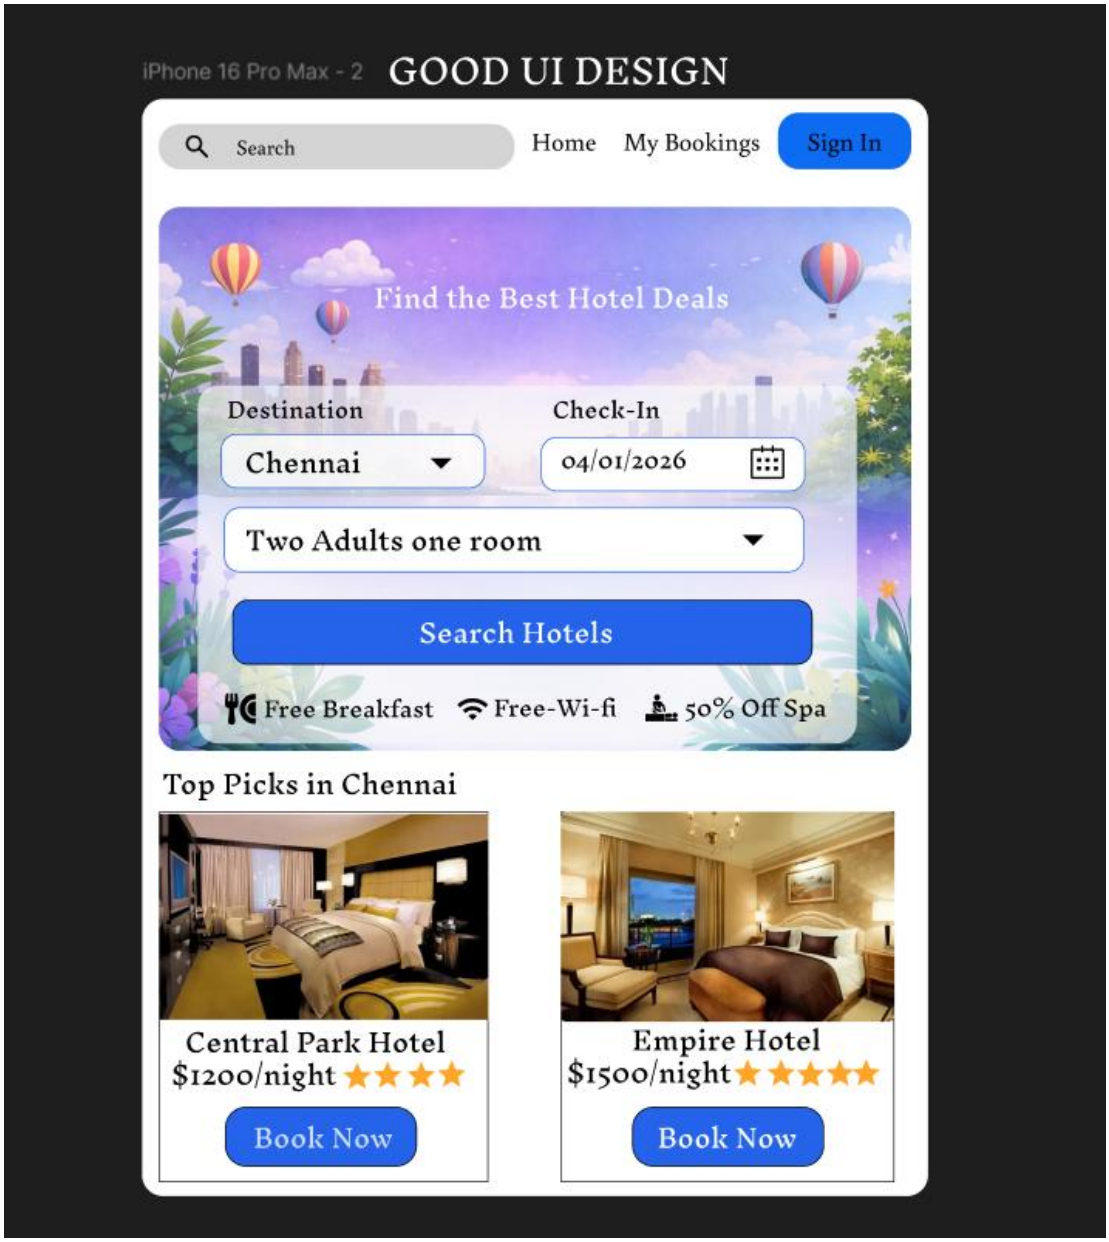
- A hotel booking header
- Location and date selection
- A search button
- A list of popular hotels with images, prices, ratings, and a Book Now option. While the content itself is useful, the way it's displayed makes it hard to quickly understand.

4. Why This Is a Bad UI Design

- **To many colours** are used together, which distracts the user and hurts readability.
- There is **no clear focus** everything looks important, so nothing really stands out.

- Related elements are not grouped well, so the page feels messy instead of organized.
- Users have to **think too much** to understand what each section or button is for, instead of instantly recognizing it.
- Spacing is poor, making the screen feel cramped and uncomfortable to look at.

Good design:



1.Purpose of the Website

This website is designed to help users **quickly and comfortably book hotels**. Everything is focused on making the search process smooth—choosing a destination, dates, number of guests, and finding good hotel deals without confusion.

2. Design Style

The design is **clean, calm, and modern**.

- Soft colours with one main highlight colour (blue).
- Consistent fonts and button styles.
- Plenty of spacing on the screen.
- A friendly illustration that sets the mood without distracting.

3. Content

- A clear search bar and navigation at the top.
- A well-grouped booking section (destination, date, guests).
- One strong primary action: **Search Hotels.**
- Extra benefits shown using icons (free breakfast, Wi-Fi, discounts).
- Hotel cards with images, price, rating, and a clear "Book Now" button.

4. Why This Is a Good UI Design

- **Good chunking:** Related things are grouped together, so users don't have to think much.
- **Clear visual hierarchy:** Important actions stand out immediately.
- **Recognition over recall:** Icons, buttons, and layouts follow familiar patterns, so users instantly understand what to do.
- **Balanced colours:** colours guide attention.
- **Comfortable spacing:** Nothing feels crowded or rushed.

Key Differences: Bad UI vs Good UI

- **Colours**
  Bad UI: Too many bright colours, hurts the eyes
  Good UI: Few calm colours, easy to look
- **Clarity**
  Bad UI: Confusing, user doesn't know where to look
  Good UI: Clear, user knows what to do immediately
- **Layout**
  Bad UI: Messy and crowded
  Good UI: Clean and well-organized
- **Chunking**
  Bad UI: Information is mixed together
  Good UI: Related items are grouped properly
- **Recognition**
  Bad UI: User must think and remember actions
  Good UI: User instantly recognizes buttons and icons
- **User Effort**
  Bad UI: User has to work harder
  Good UI: UI does the work for the user
