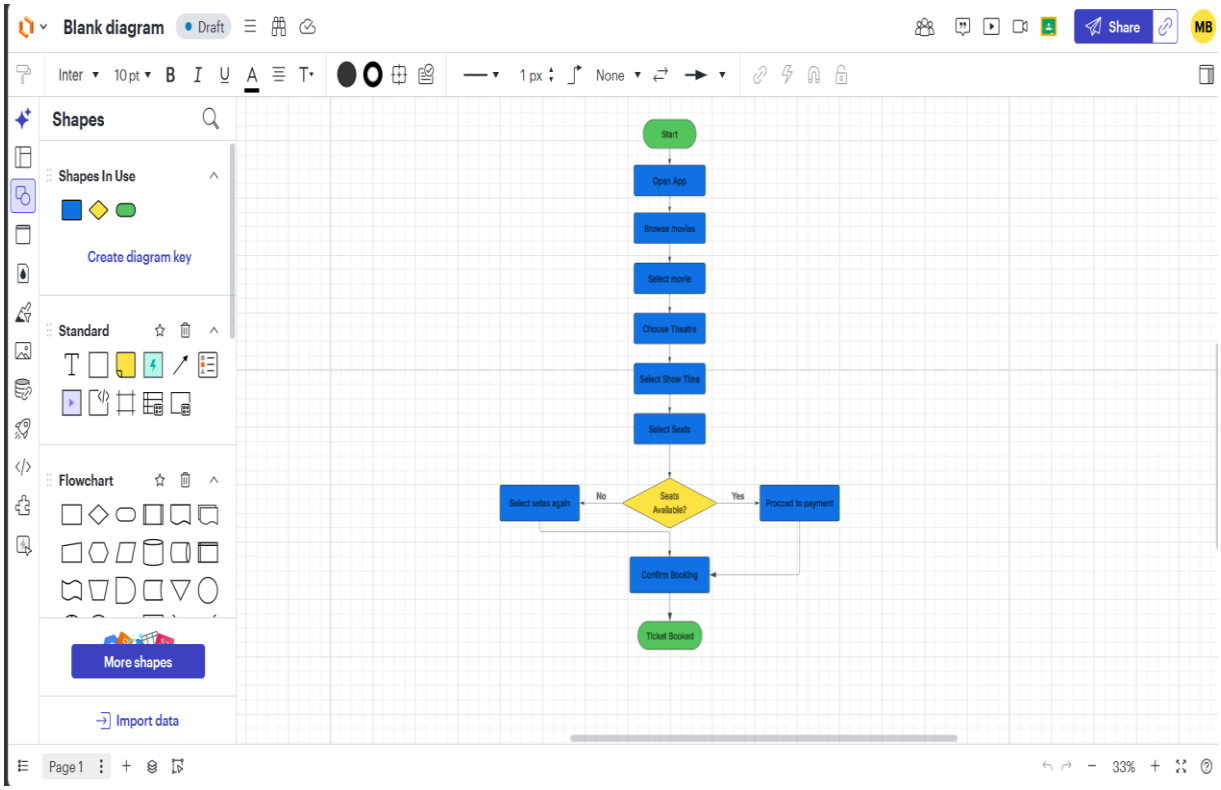
Exercise 4a

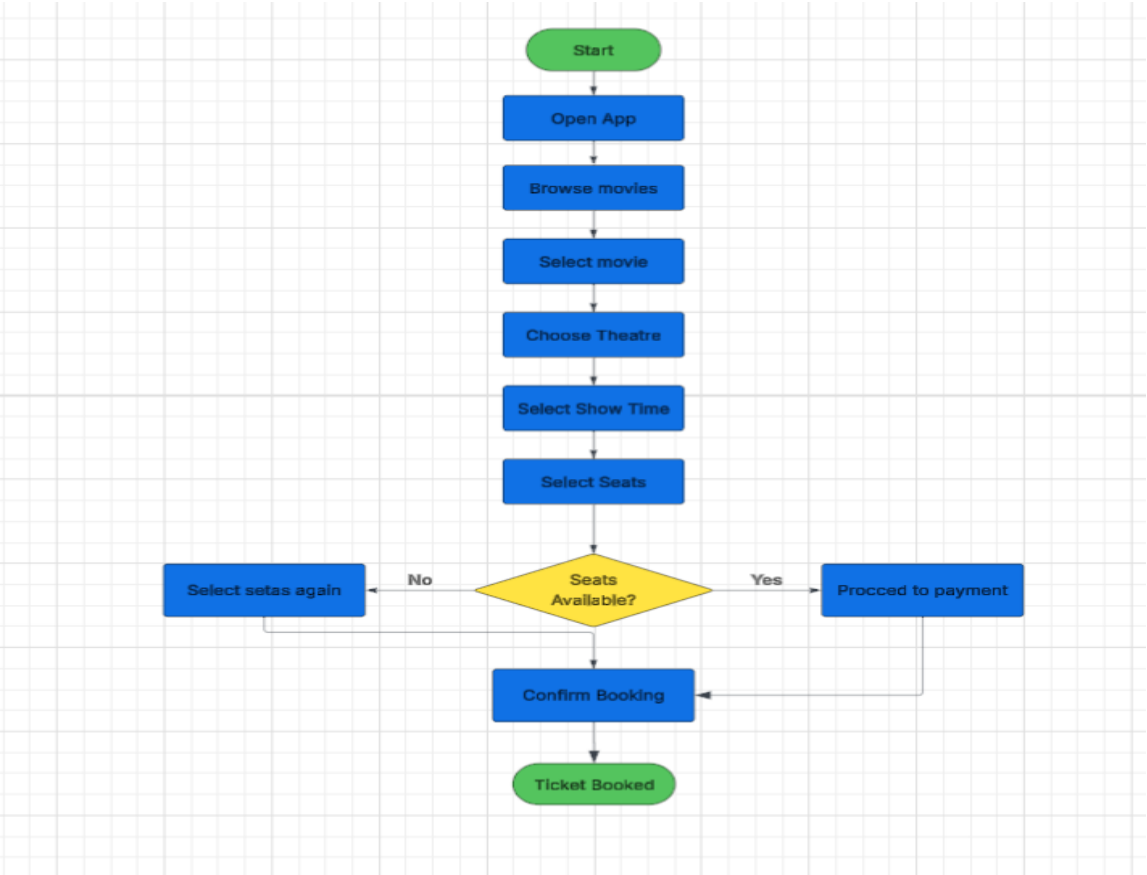
Conduct task analysis for an app and document user flows. Create corresponding wireframes using Lucidchart.

Aim:

To understand and document the steps a user takes to complete the main tasks within an online shopping app.

Tool Link: https://www.lucidchart.com/pages/.





1. Application Overview

The ticket booking app allows users to:

- Browse available options (movies/events)
- Select preferences (date, time, seats)
- Make payments
- Receive booking confirmation

2. Task Analysis

2.1 Primary Task: Book a Ticket

User Goal:

To successfully book a ticket quickly and securely.

2.2 Subtasks Involved

1. Open the application
2. Browse or search for a movie/event

3. Select desired option
4. Choose date and time
5. Select seats
6. Confirm selection
7. Enter payment details
8. Complete payment
9. Receive confirmation

2.3 Hierarchical Task Analysis (HTA)

→ 1. Launch App
→ 2. Browse/Search
→ 3. Select Item
→ 4. Choose Time & Date
→ 5. Select Seats
→ 6. Proceed to Checkout
→ 7. Make Payment
→ 8. Confirmation

3. Wireframe Description (Lucidchart)

Wireframes were created using Lucidchart to represent each screen:

3.1 Home Screen Wireframe

- Banner section
- List of movies/events
- Navigation options

3.2 Selection Screen Wireframe

- Movie/event details
- Time slots
- “Choose Theatre” or similar button

3.3 Seat Selection Wireframe

- Grid layout for seats
- Available vs booked seats
- Selection highlight

3.4 Checkout Wireframe

- Ticket summary
- Total price
- Proceed button

3.5 Payment Wireframe

- Input fields (card/UPI)
- Confirm payment button

3.6 Confirmation Wireframe

- Success message
- Booking ID
- Transaction details

Conclusion

Task analysis helps in understanding how users interact with a ticket booking system. By mapping user flows and creating wireframes, designers can:

- Improve usability
- Reduce errors
- Enhance user experience

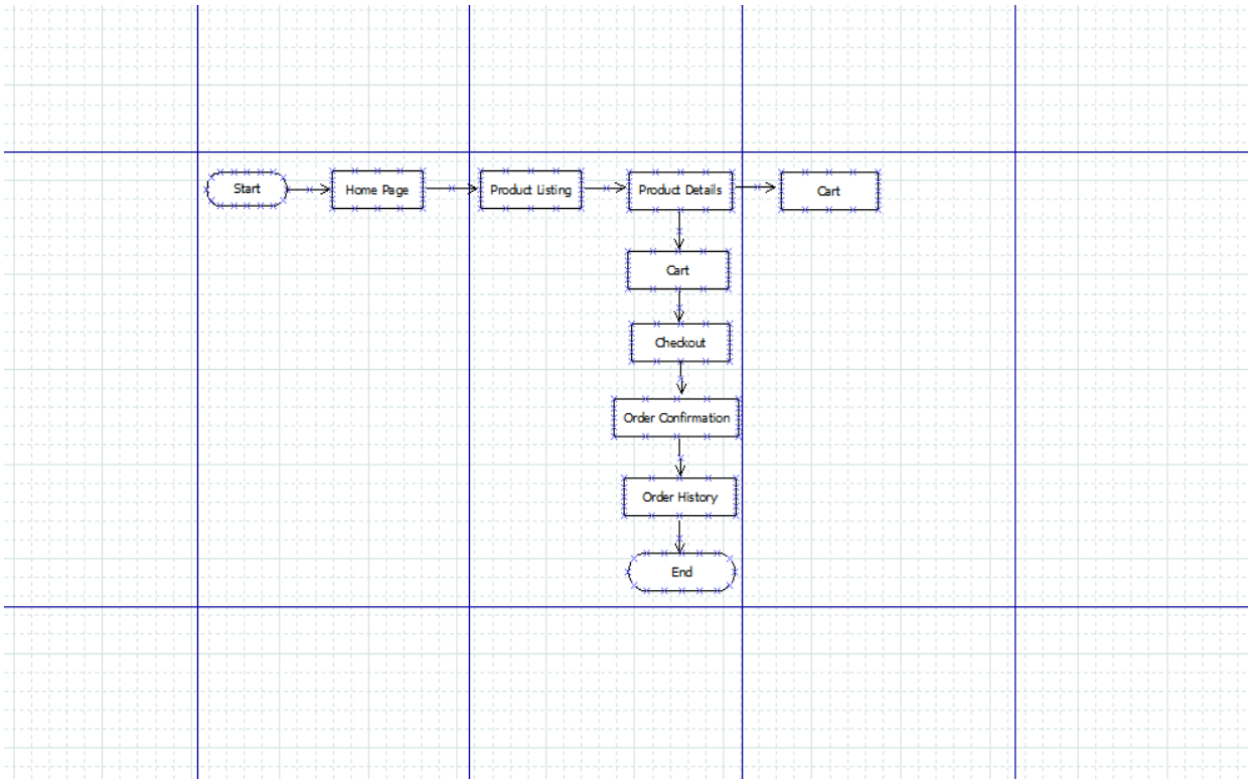
The use of Lucidchart enables clear visualization of workflows and simplifies design communication.

Exercise 4b

Conduct task analysis for an app (e.g., online shopping) and document user flows. Create corresponding wireframes using dia.

AIM:

The aim is to perform task analysis for an app, such as online shopping, document user flows, and create corresponding wireframes using Dia.



PROCEDURE:

1.Create New Diagram:

○ Go to File -> New Diagram.

○ Select Flowchart as the diagram type.

2. Add Shapes:

○ Use the shape tools (rectangles, ellipses, etc.) to create wireframes for each screen.

■ For example:

■ Home Page: Rectangle

■ Product Categories: Rectangle

■ Product Listings: Rectangle

3. Connect Shapes:

■ Product Details: Rectangle

■ Cart: Rectangle

■ Checkout: Rectangle

■ Order Confirmation: Rectangle

■ Order History: Rectangle

○ Use the line tool to connect shapes, representing the user flows.

■ For example:

■ Home Page -> Product Categories

■ Product Categories -> Product Listings

■ Product Listings -> Product Details

■ Product Details -> Cart

■ Cart -> Checkout

■ Checkout -> Order Confirmation

■ Order Confirmation -> Order History

4. Label Shapes:

○ Double-click on each shape to add labels.

■ For example:

■ Label the rectangle as "Home Page", "Categories", "Product Listings", "Product Details", "Cart", "Checkout", "Order Confirmation", "Order History".

5. Save the Diagram:

○ Go to File -> Save As.

○ Save the diagram with a meaningful name, such as "Online Shopping App User Flows".
