Exercise 3a

Create a prototype with familiar and unfamiliar navigation elements. Evaluate ease of use with different user groups using proto.io

Aim:

The aim is to develop a prototype incorporating both familiar and novel navigation elements and assess usability among diverse user groups using Proto.io.

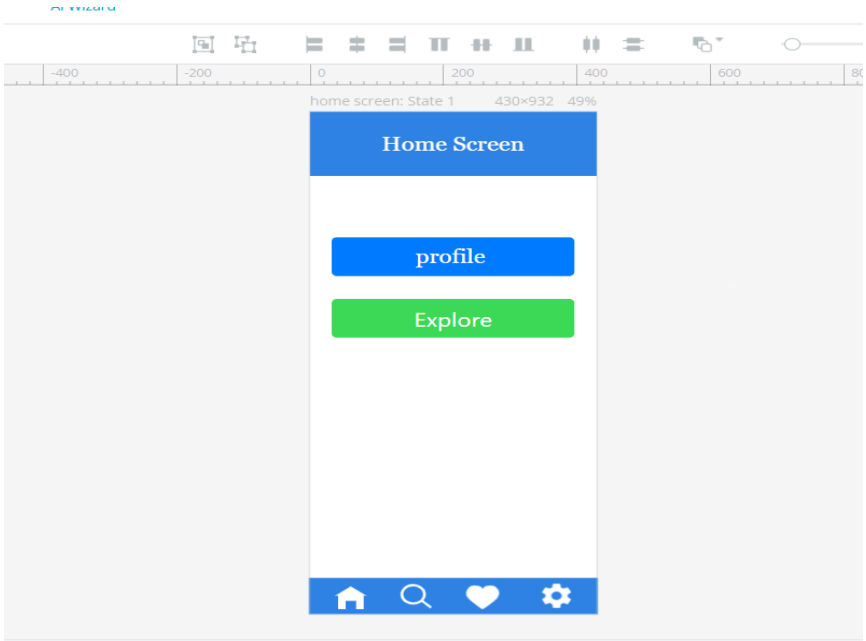
PROTOTYPE DESCRIPTION

A mobile application prototype was designed using Proto.io with four main screens:

- Home Screen
- Profile Screen
- Explore Screen
- Settings Screen

The prototype includes both traditional (familiar) and advanced (unfamiliar) navigation techniques.

1.Home screen



Description:

The Home screen acts as the main entry point of the application. It contains:

- Header (Home Screen)
- Profile Button
- Explore Button
- Bottom Navigation Bar

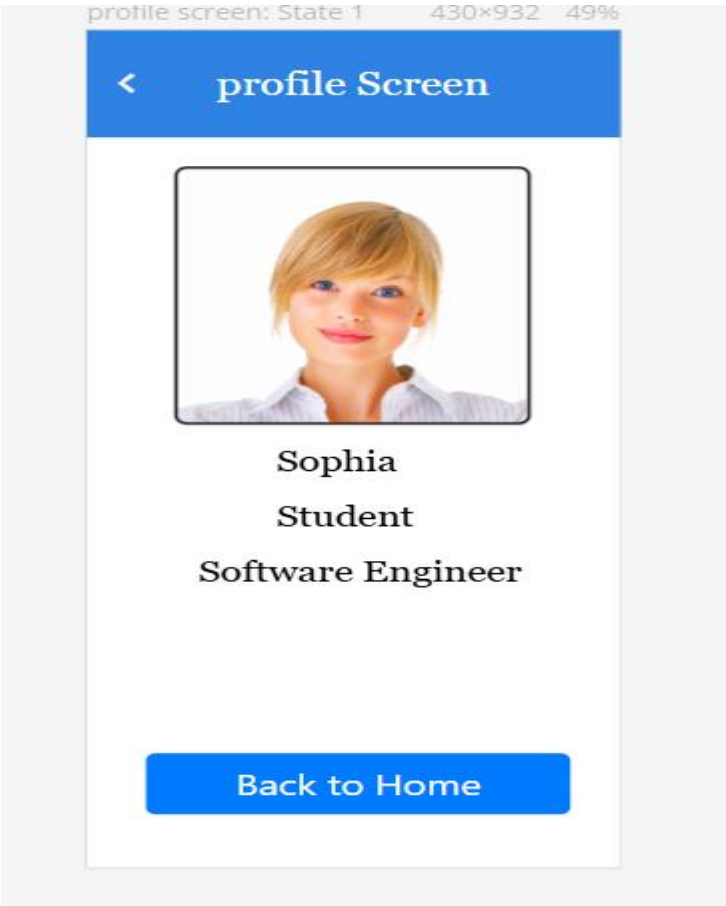
Familiar Navigation:

- Buttons (Profile & Explore): Users click to navigate.
- Bottom Navigation Bar: Common in mobile apps.

Unfamiliar Navigation:

- No unfamiliar navigation used .

2. Profile screen



Description:

The Profile screen displays user details such as:

- Profile Image
- User Name and Information
- Back to Home Button

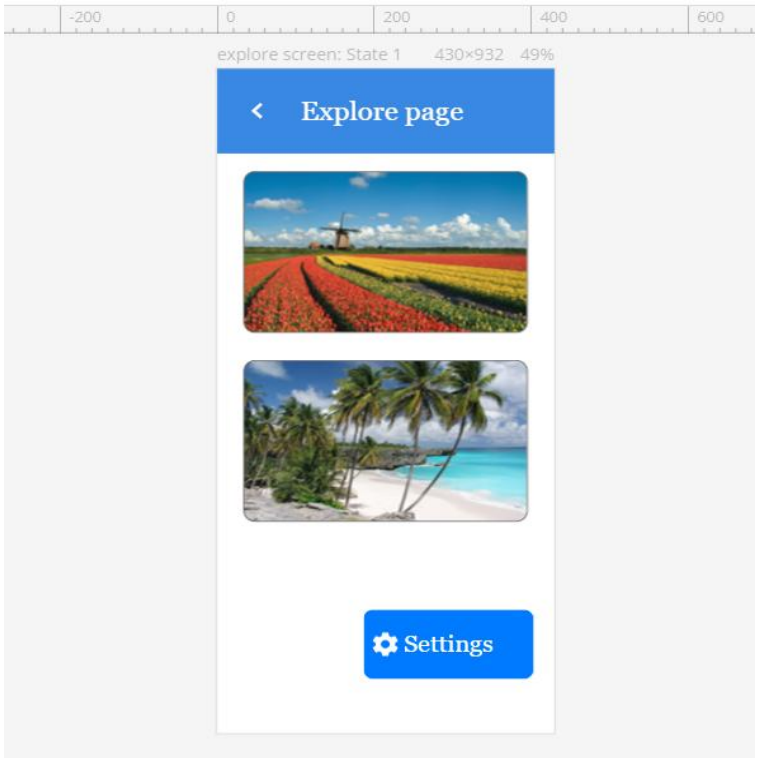
Familiar Navigation:

- Back Button:
  Allows users to return to the Home screen.
- Tap Interaction:
  Standard click-based navigation.

Unfamiliar Navigation:

- No unfamiliar navigation used (kept simple for usability).

3. Explore Screen



Description:

The Explore screen displays content such as:

- Images / Content Cards
- Floating Settings Button

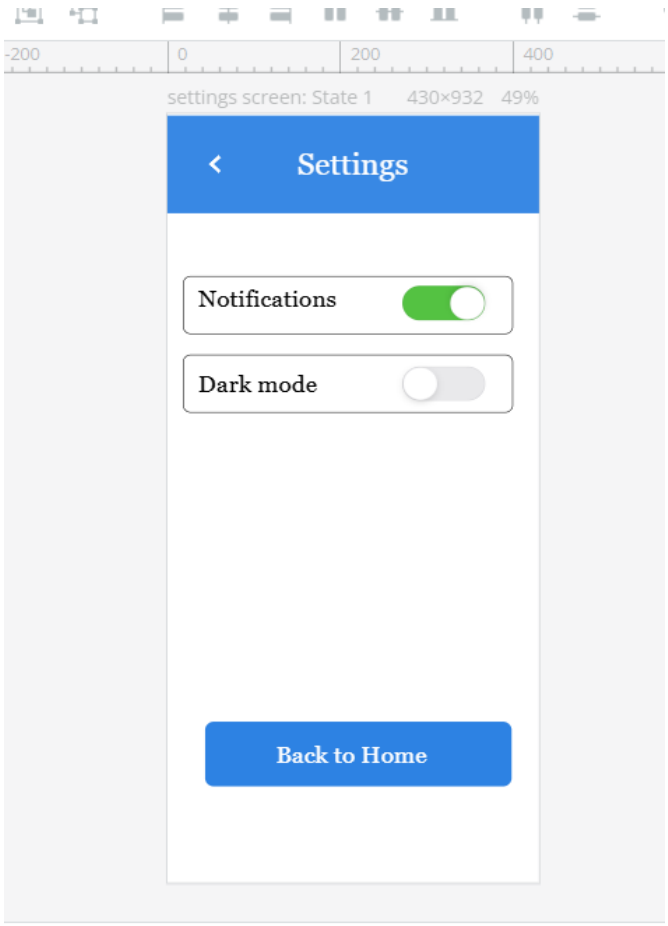
Familiar Navigation:

- Tap on Button (Settings):
  Navigates to Settings screen.

Unfamiliar Navigation:

- Floating Action Button:
  Positioned separately, not in a fixed menu, which is slightly unconventional for beginners.

4. Settings screen



Description:

The Settings screen includes:

- Toggle options (e.g., Notifications, Dark Mode)

- Back to Home Button

Familiar Navigation:

- Toggle Switches: Common for enabling/disabling options
- Back Button: Returns to Home screen

Unfamiliar Navigation:

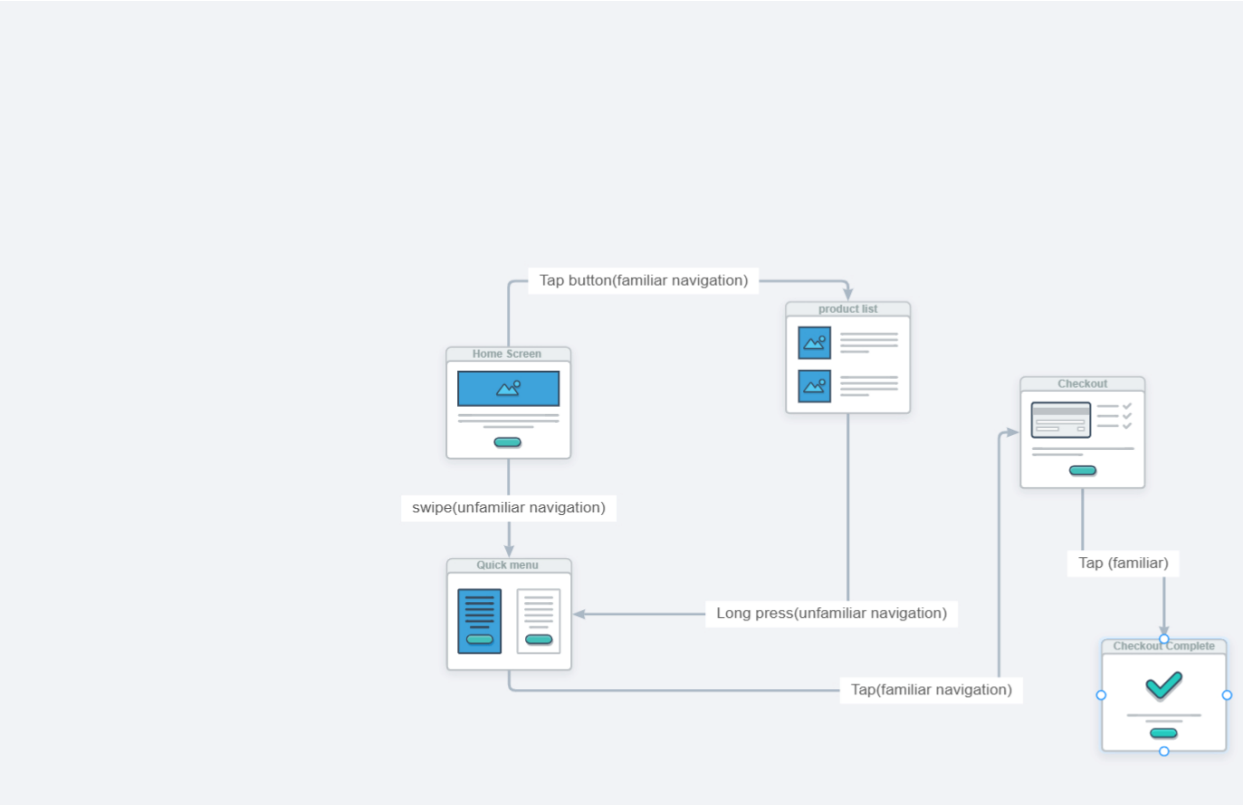
- Tap & Hold Interaction:
  Used as an experimental navigation method to trigger actions.

Exercise 3b

Create a prototype with familiar and unfamiliar navigation elements. Evaluate ease of use with different user groups using wireflow.

AIM

The aim is to design a prototype with both well-known (familiar) and new (unfamiliar) navigation elements and measure user-friendliness across different user groups using Wireflow / Proto.io**.**



1.Prototype Description

The prototype represents a simplified e-commerce user journey with the following screens:

1.1 Home Screen

- Displays a banner/image and a primary action button.
- Navigation options:
    - **Tap (Familiar):** Moves to the product list.

    - **Swipe (Unfamiliar):** Opens a quick menu.

1.2 Product List

- Shows multiple product items.
- Navigation options:
    - **Tap (Familiar):** Selects a product and proceeds to checkout.
    - **Long Press (Unfamiliar):** Opens quick menu options.

1.3 Quick Menu

- A secondary navigation panel with shortcuts.
- Accessed via:
    - Swipe from Home Screen.
    - Long press from Product List.
- Navigation:
    - **Tap (Familiar):** Moves to checkout.

1.4 Checkout Screen

- Displays payment details and order summary.
- Navigation:
    - **Tap (Familiar):** Completes the purchase.

1.5 Checkout Complete

- Confirmation screen with success message.

2. Wireflow Explanation

The wireflow visually maps the user journey:

- Users start at the **Home Screen**
- They can:
    - Tap → Product List (familiar path)
    - Swipe → Quick Menu (unfamiliar path)
- From Product List:
    - Tap → Checkout
    - Long Press → Quick Menu

- From Quick Menu:
    - Tap → Checkout
- Checkout leads to:
    - Checkout Complete screen

This structure allows comparison between:

- Direct navigation (familiar)
- Alternative gesture-based navigation (unfamiliar)

3. Conclusion

The experiment demonstrates that while familiar navigation is essential for usability, incorporating unfamiliar navigation can enhance efficiency for advanced users. However, unfamiliar interactions should be supported with:

- Visual hints
- Onboarding tutorials
- Feedback mechanisms
