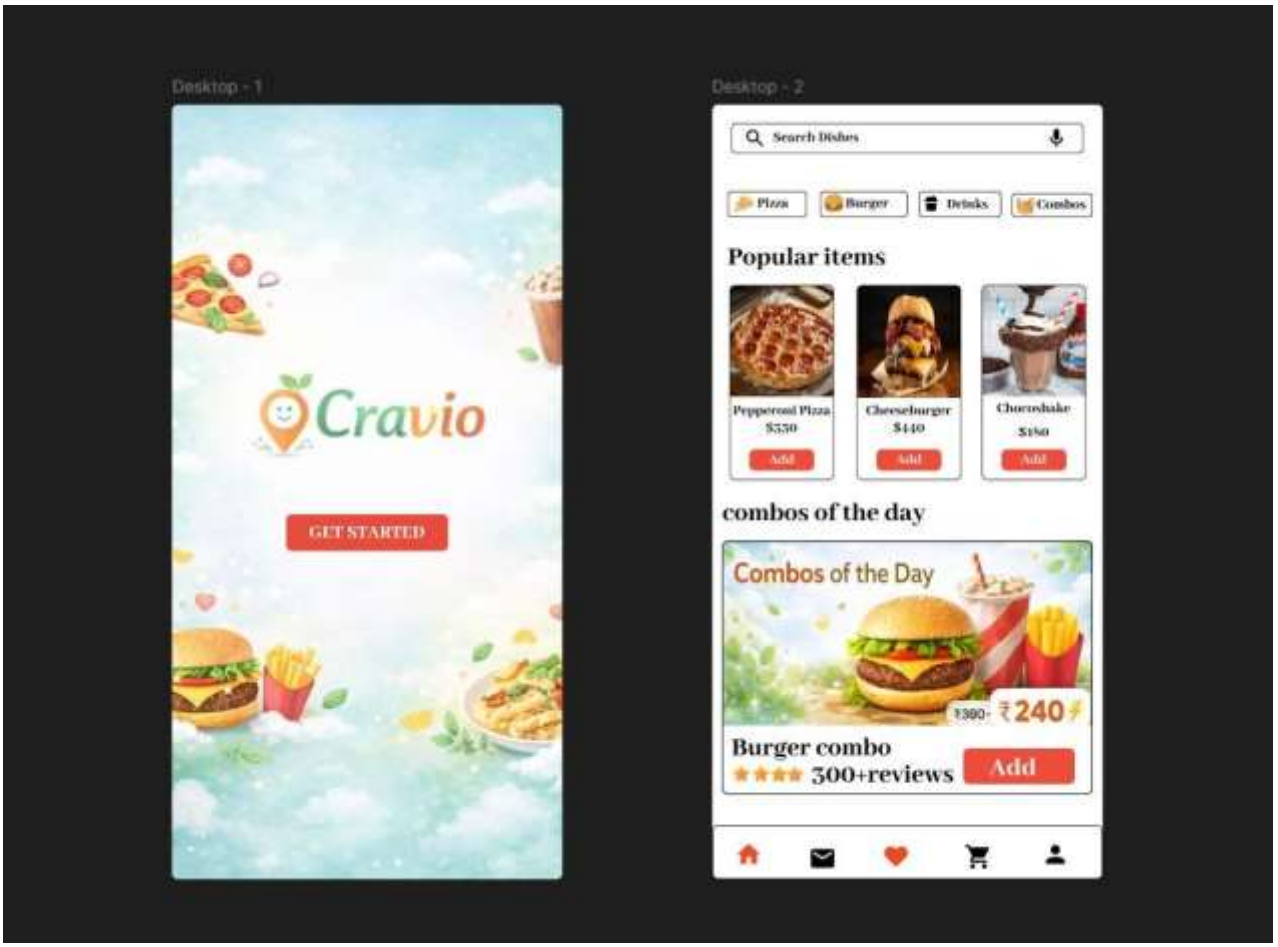
# Experiment 2

Design a UI design which resembles and justifies the core concepts of UI such as chunking , recall and recognition.

Get started screen and home page



## 1. Get started screen

### a. Purpose of the Page

This screen introduces the app and gives users a **single clear entry point** to start ordering food.

### b. Key UI Elements

- App logo (Cravio)
- Background food illustrations

- Get Started button

c. Concepts used:

**Chunking**

- Only one main action ("Get Started") is shown.
- No extra information, so the screen feels neat and focused.

**Recognition**

- Food illustrations immediately tell users this is a food app.
- "Get Started" is a familiar to users recognize it instantly.

**Recall (minimal)**

- Users don't need to remember anything here.
- The design avoids recall completely to reduce effort.

**Use:**
Helps users enter the app without confusion or thinking.

2. Home page screen

a. **Purpose of the Page**

To let users **discover food quickly** and start adding items.

b. **Key UI Elements**

- Search bar
- Category chips (Pizza, Burger, Drinks, Combos)
- Popular items section
- Combo of the day banner
- Bottom navigation bar

c. **Concepts Used:**

**Chunking**

- Search bar placed as a separate top chunk.
- Categories grouped into one horizontal chunk.
- Popular items grouped as cards.
- Combo banner visually separated to highlight offers.

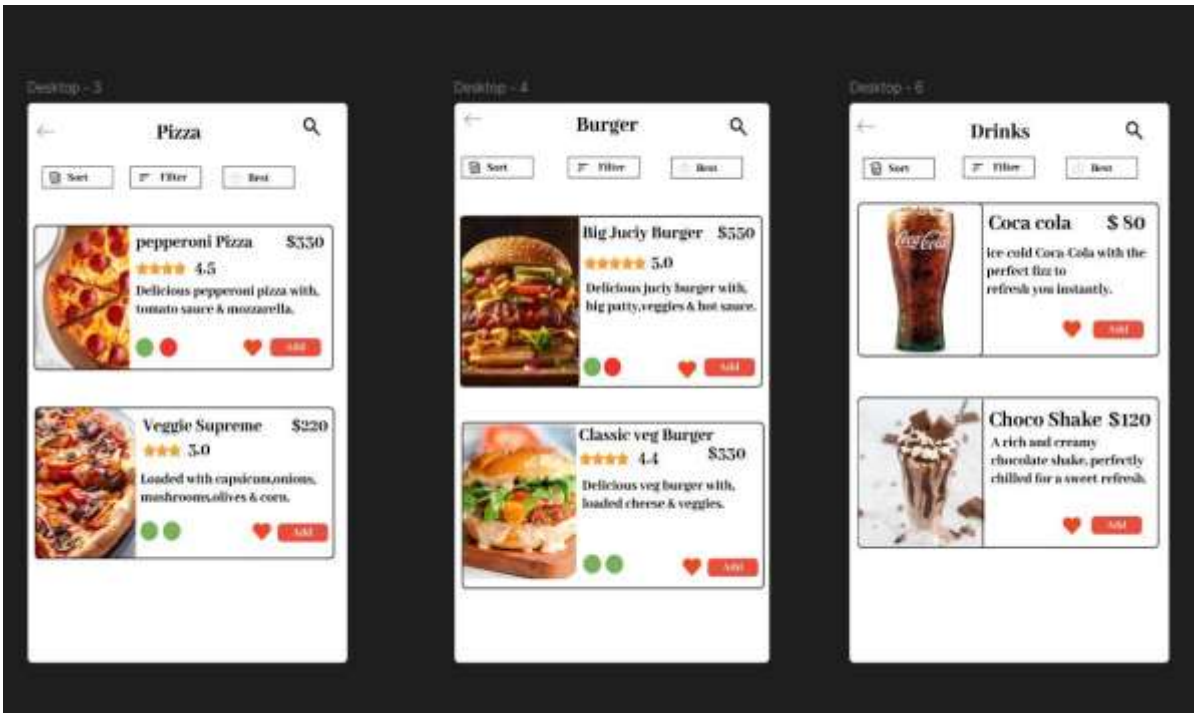
**Recognition**

- Category icons are instantly recognizable.
- "Add" buttons and bottom navigation icons are familiar patterns.
- Home, orders, wishlist, cart, account are instantly recognizable using icons.

**Recall**

- Bottom navigation stays consistent across screens.
- Users remember where Home, cart, wishlist, account are present.
- Users remember where to search, browse, and checkout.
- No need to relearn actions when returning to this screen.

3. Category Listing (Pizza / Burger / Drinks page)



### a. Purpose of the Page

To help users **compare items within one category** and choose easily.

### b. Key UI Elements

- Category title
- Search icons s back arrow icons
- Sort / Filter / Best buttons.
- Item cards with image, price, rating, description.
- Add and Favourite icons.

### c. Concepts Used:

### Chunking

- Each item is grouped as a card.
- Image, name, rating, price, and action are neatly grouped.
- Search bar placed as a separate top chunk.
- Categories grouped into one horizontal chunk.
- Combo banner visually separated to highlight offer.

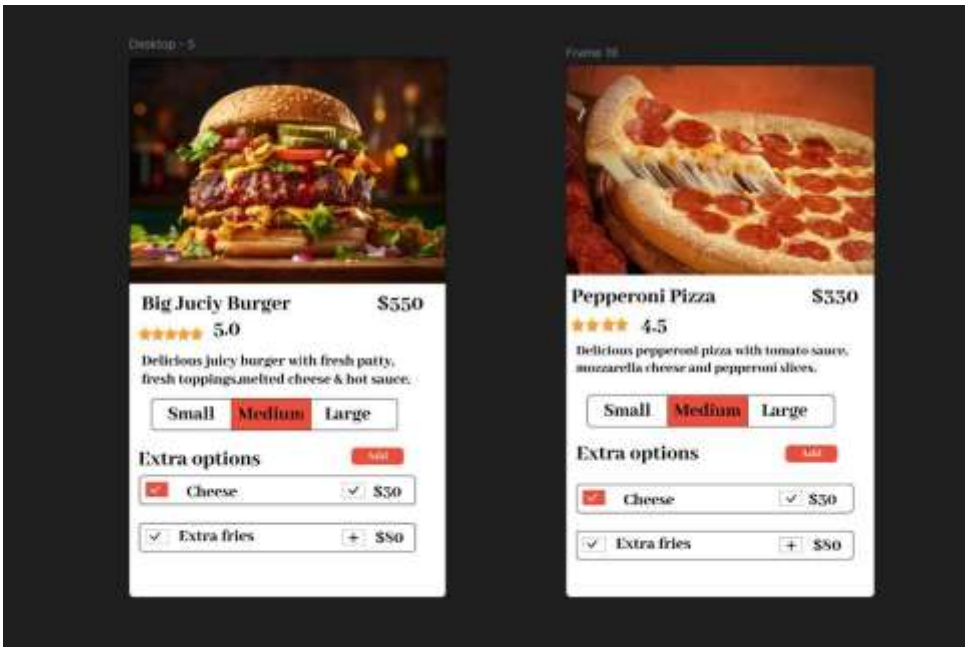
### Recognition

- Star ratings, heart icon, and “Add” button are standard UI symbols.
- Bottom navigation icons are familiar (Home, Cart, Favourites, Profile).
- Users immediately understand item quality and actions.

**Recall**

- Same card layout used across Pizza, Burger, and Drinks.
- Users remember how to interact without relearning.

## 4. Item Detail Page (Pizza / Burger Details)



### a. Purpose of the Page

To allow users to **customize their order** before adding to cart.

### b. Key UI Elements

- Large food image
- Item name, rating, price
- Size selector (Small / Medium / Large)
- Extra options (Cheese, Fries)

## c. Concepts Used:

### Chunking

- Item info, size selection, and extras are clearly separated.
- Each option is visually grouped.
- Sorting controls grouped at the top.
- Extra options separated into another chunk.
- Each option row is clearly divided.

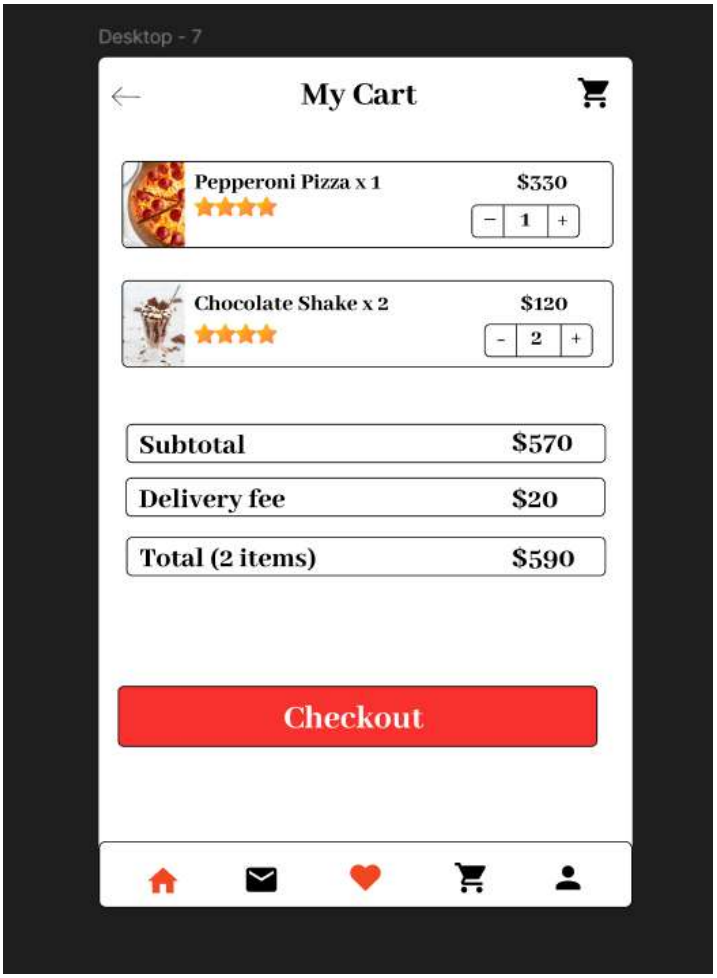
### Recognition

- Size buttons and checkboxes are familiar controls.
- Price add-ons are clearly shown next to options.
- Star ratings instantly communicate quality.
- Heart icon clearly represents favourites.

### Recall

- Same layout used for pizza and burger details.
- Users remember how customization works.

5. Cart page



a. **Purpose of the Page**

To let users **review their order and complete checkout**.

b. **Key UI Elements**

- List of added items
- Quantity controls (+ / –)
- Price breakdown (subtotal, delivery fee, total)
- Checkout button

c. **Concepts Used:**

**Chunking**

- Items list and price summary are separated.
- Checkout button stands alone for clarity.

- Price summary separated from item list.
- Checkout button placed in its own visual space.

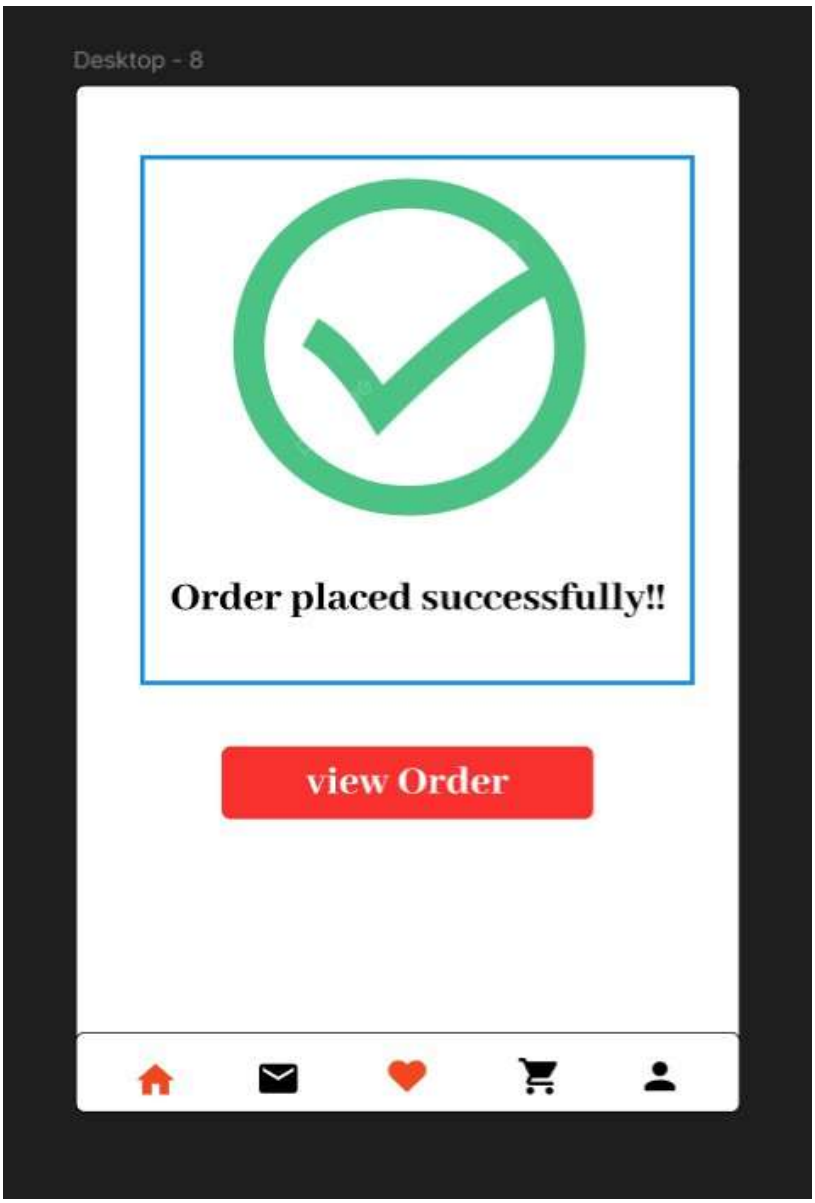
**Recognition**

- Plus/minus buttons indicates the items to be added or removed.
- Cart icon reinforces where the user is present.

**Recall**

- Quantity controls behave the same as earlier screens.
- Users already know how to adjust items.

6. Order Success Page



**a. Purpose of the Page**

To confirm the order and give **clear feedback** to the user.

**b. Key UI Elements**

- Success checkmark
- Confirmation message
- "View Order" button

**c. Concepts Used:**

**Chunking**

- One message, one action
- No distractions

**Recognition**

- Green checkmark instantly signals success
- Familiar confirmation pattern

**Recall**

- Button action is clear without explanation
